

MHOUSE PHOTOCELL TOWERS

Preassembled: efficiency and quick installation

PT50: pair of 485mm high posts, with a pre-assembled photocell on each, adjustable height

PT100: pair of 945mm high posts, with two pre-assembled photocells on each, adjustable height

Sturdy and elegant: made of profiled aluminium with polycarbonate front and shock-resistant base

Convenience: very simple alignment thanks to the LED signal with proportional flashing. Convenient jumpers for selection of the required function

Maximum security: electronics protected by a second plastic enclosure to prevent damage during installation. The antidazzle circuit protects you from blinding glares generated by the sun or other powerful light sources. Suitable for Mhouse systems of any size, since up to 7 pairs of photocells can be installed without worrying about their proximity
