MHOUSE REMOTES

Miniaturized 4 buttons variable code transmitters with 433.92MHz transmission frequency and self-learning function

Total security ensured by the variable code with 18 billion billion combinations!

Unclonable: the code varies with each transmission according to an algorithm that masks the code and does not show any relation with the following ones, which can only be recognized by the Mhouse receiver: the same technology used in antitheft systems

Convenience: four keys for control of as many devices, transmission confirmation LED, key ring eyelet. Very autonomous and lightweight with the two 3V lithium batteries
